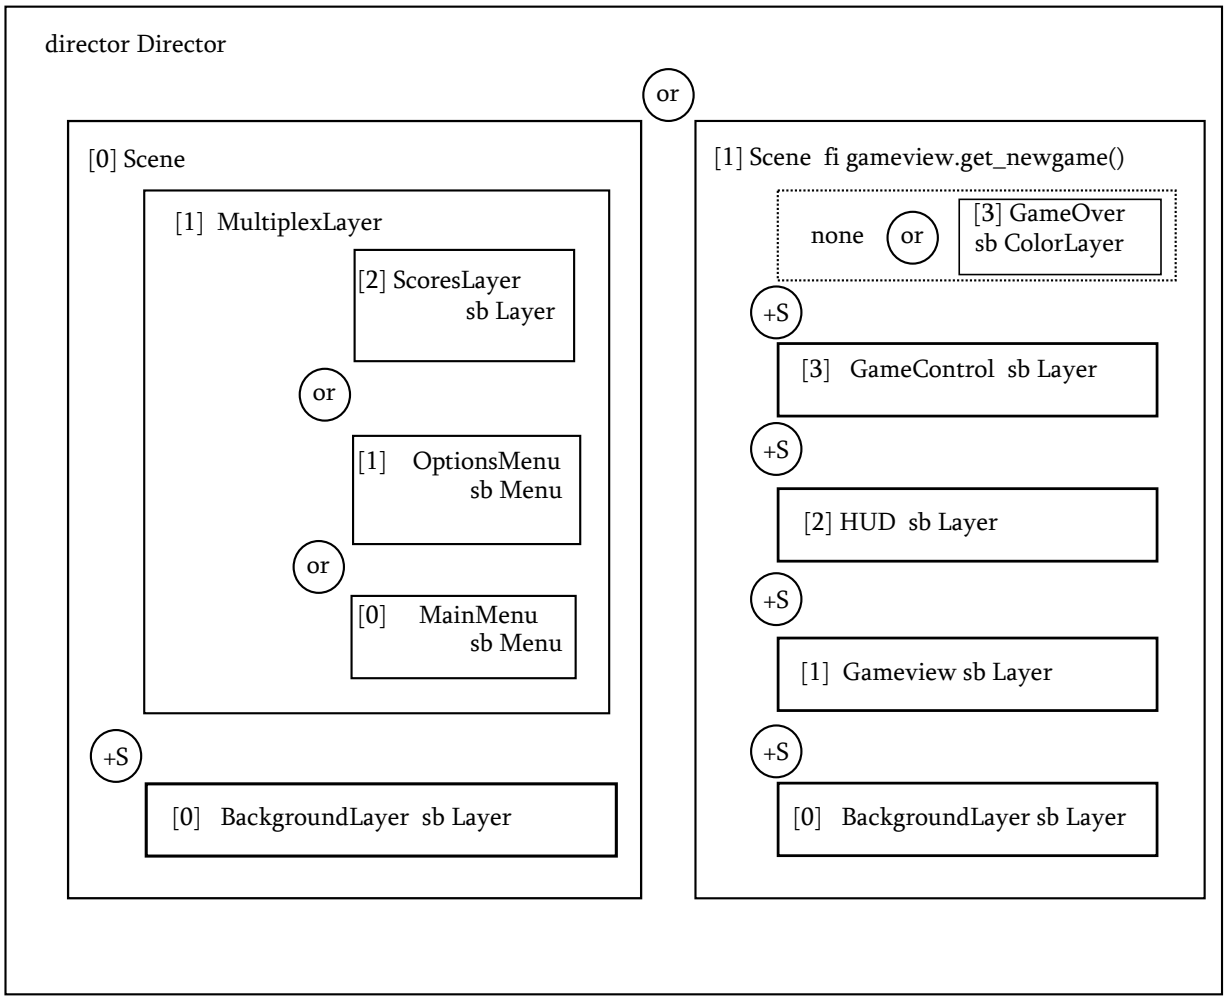
tetrico app compositing diagram



References

or — show only one of the or-ed components

+S — stacked composition

+L — layout composition (same plane)

*L ... layout composition of same tipe nodes

+a xx — instance

instance is visible only when performing action xx

virtual component: a visual component that dont map to a single instance in the code, but is useful in the description..

component: a visual component that maps a concrete instance in some place of the code.
The fist line tells the instance name, the instance class, and a hint about how the instance is created:
ins Blop sb Layer means instance ins (in the parents scope) is class Blop , wich is subclass of cocos.Layer, and the instantiation is simply ins=Blop(...)
ins Blop fi fac means instance ins (in the parent scope) is class Blop, instantiated by calling the factory fac
